

# Ballistiflex

## ANTI-RETURN CURTAINS

Our curtains are made of a high-density polymer **that prevents bullets from returning to the shooting range.**

The ball crosses the curtain and the hole created is partially closes immediately under the effect of the heat generated.

In the event of a ricochet, **the bullet no longer has the energy necessary to cross the curtain again.**

Our curtains also offer the possibility of being used as projection screens in the video training setting.

The **BALLISTIFLEX** solution adapts to your ammunition recovery systems: bullet traps, backstops, etc...

## OUR STRENGTHS

Our curtains guarantee the **safety of shooters** and play an important role in the **reduction of noise pollution.**

### Shooter's safety

Anti-return action

### Noise reduction

up to 35dB

### Facilitates the retention of shooting dust
